

ESSENTIAL

Because we have been deemed an “essential” company, we are open for business and here to support our client base.

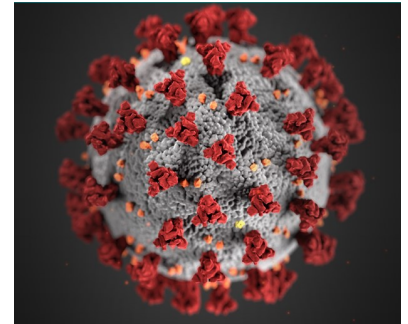

Business Hours:

Monday - Friday: 7 am to 5 pm

Saturday: 7 am to Noon

If you are stuck at home and wish to introduce some productivity and beauty, consider tuning-up those existing flower beds or creating a whole new landscape. Maybe you're needing bagged material, mini-super sacks, or even a load of soil brought to your home. No problem - All our services are up and running, including deliveries and material pick up. Whether you need soil, mulch or compost, just call or text 972-831-8181 to set your project in motion.

Please note: Rather than coming in to SBS, please practice social distancing by calling us to discuss your needs. If picking up material at SBS, rather than entering our building to interact face-to-face with SBS' office personnel, we ask that customers only use our drive-up windows. We are enforcing social distancing and other measures, to keep our employees safe and able to continue to serve your needs. Thank you for allowing us to serve you, and for your respect of distance.

Hydraflo Product Line

With the seemingly unending rain, drainage issues have been front and center lately. Insufficient drainage can cause numerous problems including soil erosion, anerobic and putrefied soil conditions, plant stress and plant death.

When your clients have challenging drainage issues, look to SBS. We have many solutions to expedite percolation which will help avoid the soil being overwhelmed with water.

Below are a few products in our Hydraflo product line, all of which are designed to move moisture and avoid prolonged saturation.

- ◆ **Deep Bedding Soil™** - General purpose planting soil for beds 12" - 48" deep.
- ◆ **Turf Soil™** - Allows water to get off the turf surface quickly. For pristine grasses.
- ◆ **Deep Tree Mix™** - For new tree installation with root balls over 18" tall.
- ◆ **Ultra Container Soil™** - De facto standard for deep planters and on-structure applications.
- ◆ **Moderately Pervious Container Soil™** - Achieves a slower percolation rate than the Ultra Container Soil™, and is less susceptible to nitrogen migration.
