

Structural Soils

Did you know that SBS is the leader in structural soils? We have numerous solutions to address the needs of the environment you are working in, whether you need something for grass areas to withstand high foot traffic or vehicles; structural bedding materials for the purpose of supporting heavy structures permanently in the same area you are growing plants; or sidewalk / paver area plantings typically associated with trees. We've got it all.

Lawns: SBS' **Structural Turf Soil™** and **Lightweight Turf Soil™** are designed to withstand excessive foot traffic and brute force weight requirements. These materials are superb for grass growth while allowing for extreme foot pounding and abuse that normal lawn soils simply can not endure. These materials are used extensively for AT&T Stadium's overflow parking lawn areas, and all turf areas at Klyde Warren Park (the exceedingly popular park that bridges Downtown & Uptown in Dallas).

Bedding: Many deep planters are installed in inappropriate materials and will drop by 4"-18" in its first year. In contrast, SBS' **Structural Bed Soil™** and **Ultra Container Soil™** are designed to provide proper rooting environments (i.e. texture, pH, water moving and holding characteristics) while not collapsing on itself. A structural soil is needed in deep planters to provide the structure to support itself against itself. These materials are used extensively all across the Metroplex and are considered the de facto standard for deep planters, on-structure gardens and other weight bearing applications for general landscape plants.

Trees: In urban settings you have cityscapes with trees planted alongside a street, or inline within a sidewalk or paver-lined walkway. SBS' **Structural Soil for Tree Roots™** or our **Tree Vault Soil™** / **Silva Soil™** achieves the objective of supporting the static surface weight of concrete or brick while providing the appropriate sub-straight and growing media for long term non-sinking and non-smothering growing environment, while preventing the heavy surface material from shifting or cracking. And just as important, the SBS solutions are affordable when compared to other materials on the market including university-patented solutions. These materials have been used in various municipality jobs across the area, and most recently on The City of Ennis' revamped historical downtown area.

When you can't have shifting, sinking or heaving planting areas, SBS has you on solid ground!

BROWN MULCH

Introducing a new SBS mulch!

Nicely textured and plenty of fines, Introductory offer during August:

\$28.99 per CY
